

Localize your courses completely. Images included.

Smartcat automates image translation so every course your team produces is fully localized in every language without adding in design.

Course localization should be complete, not partial.

Fortune 1,000 leaders trust Smartcat to localize learning content at scale and keep training programs on schedule.

Course Localization Always Breaks at Images Smartcat Makes It Complete

Without Smartcat

- Images embedded in courses, like screenshots, diagrams, infographics, contain text that standard localization tools can't handle. Software screenshots are the worst offender: recapture them manually in every language.
- Every image that needs updating becomes a design request. L&D teams route files to designers who weren't planned for, and courses get delayed waiting for assets.
- Approved terminology lives in a separate doc. There's no guarantee it makes it into every course image.

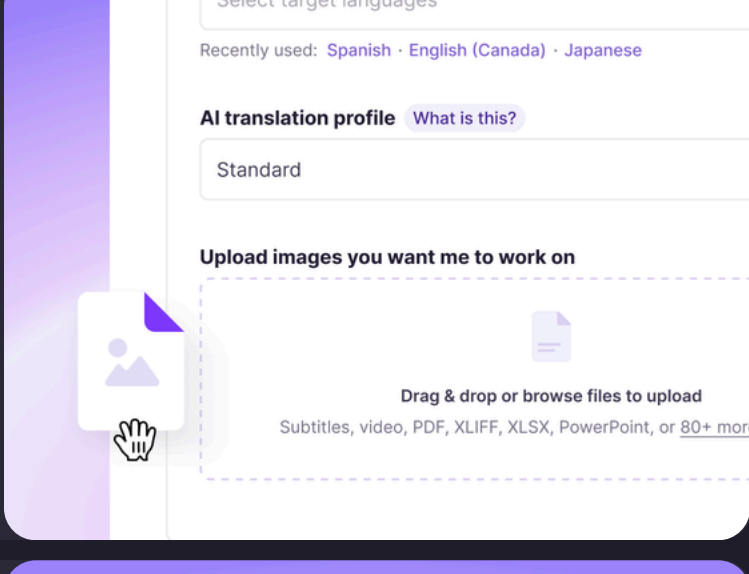

With Smartcat

- Upload the course and Smartcat translates embedded images automatically. No recapture, no manual replacement.
- From upload to finished course without a single design handoff. No requests, no wait, no cleanup.
- Translation memory and glossaries apply automatically. Approved language, every time.

Image Translation: How It Works

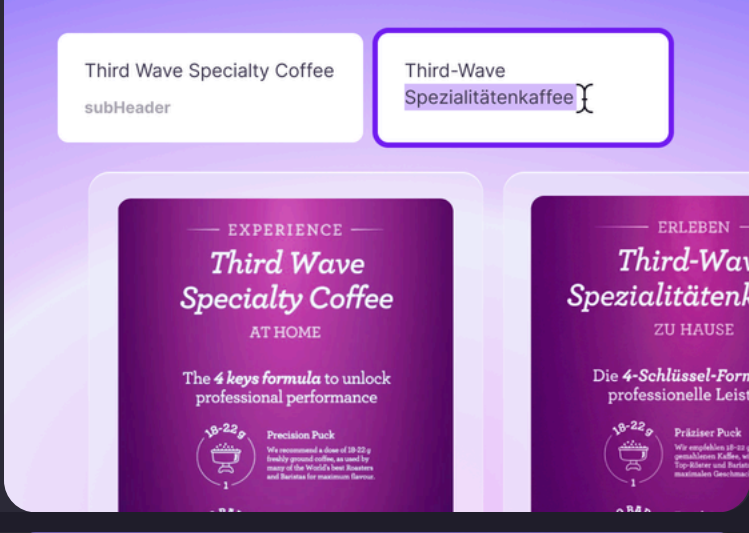

Upload your SCORM package or standalone image

Smartcat automatically identifies images containing text. Works with Articulate Rise, Storyline, and standard PNG and JPEG formats.

Review and approve the translation

You'll see the translated text broken out by text block. Edit any segment directly before the image is rendered.

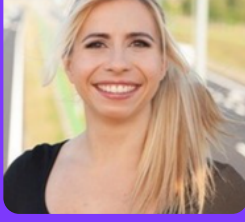

Download and upload to your LMS

Receive a repacked SCORM archive with all images localized and course structure intact. Ready to upload.

“Smartcat accelerated our end-to-end global eLearning content turnaround by 400%, enabling faster delivery of training across seven languages.”

Business Impact Across the Organization

Learners get the full experience in their language

Every image in every course is localized — no exceptions, no English-only visuals in markets where learners speak something else.

L&D teams stay focused on content, not coordination

Removing design requests from the workflow means program managers spend time on learning strategy, not file tracking.

Global training programs scale without adding resources

More languages, more courses, more markets without adding designer hours, agency spend, or turnaround time.

Powered by Smartcat’s AI Enterprise Platform

Intelligence Fabric

Learns from SME edits and enterprise standards, continuously improving translation quality over time.

Agents & Orchestration

Automates complex content workflows and intelligently routes content across teams.

Expert Collaboration

Combines AI speed with human judgment to ensure quality without slowing down launches.

Smartcat AI Visibility & Control

Provides end-to-end visibility across projects, languages, and stakeholders.

See It in Action

Is image localization holding up your course launches? Book a demo and we'll show you exactly where image translation fits into your workflow.
