

# Localized images, no designer required.

Smartcat automates image translation so your visual assets are production-ready in every language without adding in design.

Global images should be localized, not in English.

Fortune 1,000 leaders trust Smartcat's image translation to localize visual assets at scale and keep global campaigns moving at the speed of their business.

## Image Localization Slows Marketing Down Smartcat Makes It Fast

### Without Smartcat

- Translating a banner means opening the source file in Photoshop, Illustrator, or Figma and replacing text layer by layer. When all you have is a flattened PNG, you're starting from scratch.
- Every localized asset requires a design request. Teams wait, files go back and forth, and output still needs cleanup before anything goes live.
- Approved terminology lives in a separate doc. There's no guarantee it makes it into every image.

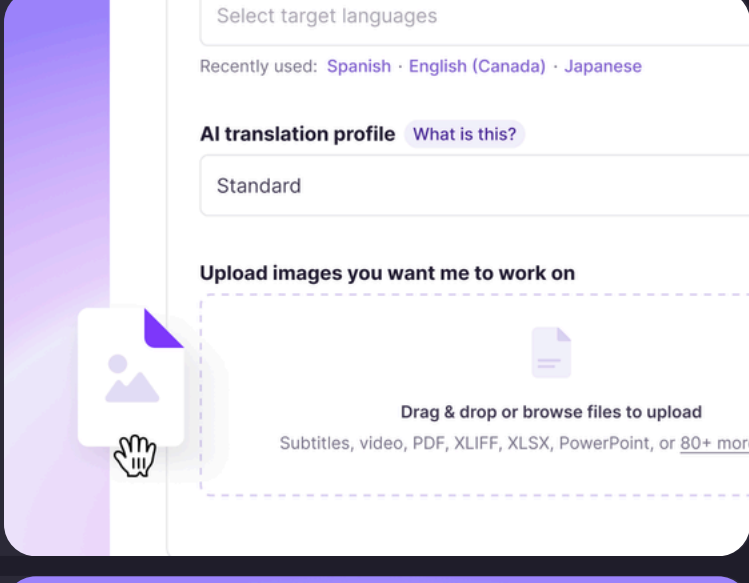

### With Smartcat

- Upload any PNG or JPEG — including exports from Figma, Photoshop, Illustrator, or InDesign. Fonts matched, layouts preserved. Ready to use.
- From upload to finished asset without a single handoff. No requests, no wait, no cleanup.
- Translation memory and glossaries apply automatically. Approved language, every time.

## Image Translation: How It Works

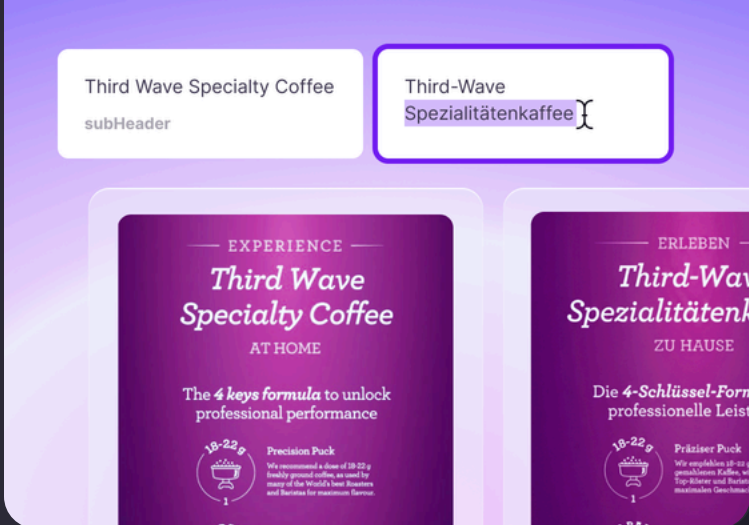

### Upload your image

PNG, JPEG, or an exported file from Figma, Photoshop, Illustrator, or InDesign. No source file required.

### Review and approve the translation

Translated text appears in a segment grid. Edit any segment before the final image is generated. Full control, no design tools needed.

### Download a production-ready asset

Fonts matched, layouts intact, no artifacts. Repeat across every language in the same workflow.

“We've been able to increase our productivity by 50% while reducing our outsourcing costs by 50%.”

## Business Impact Across the Organization

### Campaigns reach every market on time

Visual assets are localized in the same workflow as the rest of your content, no separate track, no downstream delays holding up a launch.

### Design teams stay focused on creative work

Removing localization cleanup from the design team's plate means those hours go back to net-new creative output.

### Global scale without growing the team

More languages, more campaigns, more markets without adding designer hours, agency spend, or turnaround time.

## Powered by Smartcat’s AI Enterprise Platform

### Intelligence Fabric

Learns from SME edits and enterprise standards, continuously improving translation quality over time.

### Agents & Orchestration

Automates complex content workflows and intelligently routes content across teams.

### Expert Collaboration

Combines AI speed with human judgment to ensure quality without slowing down launches.

### Smartcat AI Visibility & Control

Provides end-to-end visibility across projects, languages, and stakeholders.

## See It in Action

Is design slowing down your image localization? Book a demo and we'll show you exactly where image translation fits into your workflow.
