

Review Less. Catch More. Improve Every Time

Smartcat's Reviewer Agent pre-reviews translated content before it reaches your team, flagging only what requires human judgment and getting smarter with every expert decision.

Manual review slows even the most efficient teams. Fortune 1,000 leaders trust Smartcat's Reviewer Agent to cut review cycle time and keep complex content moving at the speed of their business.

Built for Teams Where Review is Complex

Reviewer Agents are designed for teams running high-volume, complex translation workflows where manual review is often a standard step, and where sourcing qualified reviewers, coordinating across multiple stakeholders, and hitting launch timelines is a constant challenge.

Review Slows Growth

- Sourcing a qualified reviewer is time-consuming, and availability and timelines are unpredictable
- Technical and specialized content requires deep subject matter expertise that is difficult to find and hard to scale
- Projects requiring multiple reviewers simultaneously are difficult to coordinate and slow to complete
- High review volume compounds every sourcing and coordination challenge, making it harder to keep pace with content output

The result: delayed launches and SME time spent on the wrong things.

AI That Makes Review Faster

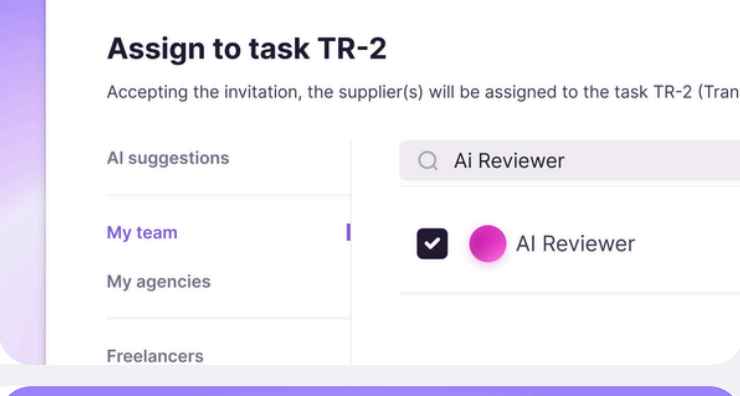

- The Reviewer Agent reduces the scope of human review automatically, so less reviewer time is needed per project
- The agent handles the complexity of specialized content, reducing dependency on hard-to-source SMEs
- The agent handles the first pass automatically, making human review a smaller, more contained step in the process
- The agent learns from every expert decision, reducing what surfaces for human review on every subsequent project

Subject matter experts can be up to **10x more effective** in review workflows, focusing on decisions that drive impact, not repetitive checks.

AI Reviewer Agents: How They Work

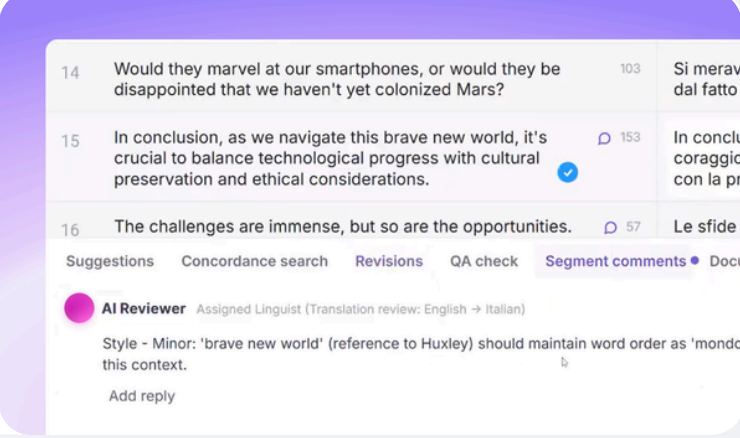

1 Content Enters the Workflow

Translated content routes to your Reviewer Agent immediately. Analysis begins against your quality standards, terminology, and consistency standards.

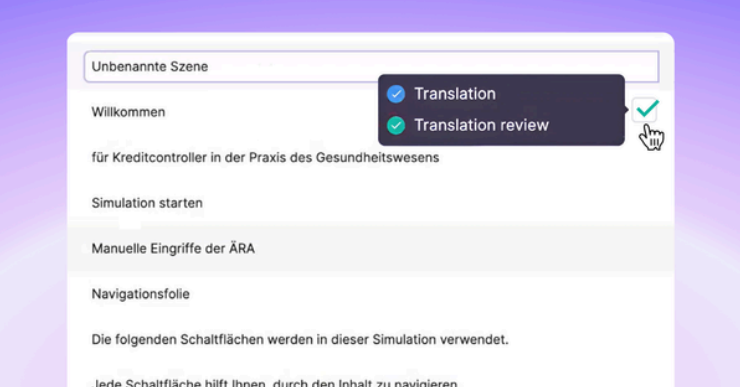

2 AI Reviewer Agent Flags What Matters

The agent evaluates translation accuracy, terminology, fluency, and tone, surfacing only the issues that require expert judgment so reviewers spend time on decisions, not error-catching.

3 Experts Review with Focus

SMEs validate high-impact items. Their edits and corrections are captured permanently, feeding back into the agent and improving every future review automatically.

Review cycles shorten. Expertise scales.

“ We don't remove humans from the process. We reposition them where their judgment matters most, and every edit they make is captured permanently. ”

Nicole Morgan

Director, Global Sales and Service Enablement, Cummins Inc.

Business Impact Across the Organization

Faster review cycles from translation to sign-off, so launch timelines become more predictable and content moves faster from translated to approved

Less reviewer time required per project, so internal SMEs stay focused on their primary responsibilities and high-volume workflows stay on track

The agent learns from every expert decision, reducing what surfaces for human review on every subsequent project.

Powered by Smartcat's AI Enterprise Platform

Intelligence Fabric

Learns from SME edits and enterprise standards, continuously improving review quality over time.

Agents & Orchestration

Automates complex content workflows and intelligently routes content across teams.

Expert Collaboration

Combines AI speed with human judgment to ensure quality without slowing down launches.

Smartcat AI Visibility & Control

Provides end-to-end visibility across projects, languages, and stakeholders.

See It in Action
